Final Project Idea

For my project, I plan to use the Ideas we learn to make my esports internship website more user-friendly and overall better. I would likely use what we learn about d3.js for data visualization for esports player data.

I also want to use what we learn in my Advanced web programming class, as well as my capstone class. In advanced web programming, our project is to make an E-Commerce site. I will likely use what we learn to make further the quality of that project. For my capstone class me and two other people are tasked with making a website for a linguistics professor here on campus. What we learn about tone.js might be useful in that class, but the ideas we learn certainly will be useful for all of my projects.
