Title: Use what I learn

This project is of type Other because I am using what I learn on multiple projects.

My project is to use what I learn in this class on other projects that I am working on. So far my capstone group is using P5.js for audio recording and playing audio, along with jQuery for GET requests and data formatting. We are also going to use javascript localStorage. In Advanced Web Programming, I plan to use localStorage, jQuery animation, and likely other aspects of what we learn. For the Internship, I am using jQuery for GET requests and data formatting and I plan to add jQuery animations, I also might find a use for localStorage.

All of the assets used in these projects will either be created by hand or sourced using google. As for online resources, I will be using the documentation for javascript, jQuery, P5.js, as well as w3schools.com.

My project will be completed as I complete my other projects. Capstone is nearing completion as we are beginning our final round of UI testing this week. Advanced Web Programming will be completed by May 1st. The Internship project will likely be completed by the end of the semester, where we will hand what we've made off to Jimmy to put onto a hosting service.
